## 2009-12-21 Linux kernel driver that handles IRQ

## **Plan**

- make minimalistic driver that requests IRQ on load and release it on unload;
- pass IRQ no. as a module parameter;
- (variation) make ISR lock spinlock and not release it; see how it looks;
- (extra) modify gemu to allow emitting IRQ from monitor;

## Worklog

**TBD** 

## **Conclusion**

- initramfs is fun: bzImage holds rootfs and re-builds it even if kernel code is not changed;
- spinlock re-acquisition locks up hard;
- qemu internal hardware objects are not that easily navigable to be continued;
