2009-12-21 Linux kernel driver that handles IRQ

Plan

- make minimalistic driver that requests IRQ on load and release it on unload;
- pass IRQ no. as a module parameter;
- (variation) make ISR lock spinlock and not release it; see how it looks;
- (extra) modify qemu to allow emitting IRQ from monitor;

Worklog

```
TBD
```

Conclusion

- initramfs is fun: bzImage holds rootfs and re-builds it even if kernel code is not changed;
- spinlock re-acquisition locks up hard;
- qemu internal hardware objects are not that easily navigable – to be continued;

linux, lkm, qemu, lted
