linux-user support for target/xtensa port of QEMU

Issues

- [+] preadv/pwritev don't translate between target low/high parts of file offset and host low/high
- [+] clock_settime is not supported
- [-] FUTEX_UNLOCK_PI and other -PI primitives are not implemented
- [-] vfork is not supported
- [-] clone flags, such as custom signal on child termination, are not supported
